The Do's and the Don'ts -

The Don'ts first -

'The official advice from D of E is that they must be switched off and sealed up in your bag'

Let's discuss this now and apply a bit of common sense:

Now the Do's -

So how can you use a mobile phone to help you on expedition ?

Let's discuss this now and apply a bit of common sense:

A circular inset image showing a landscape with a lake, mountains, and people. The scene is misty or foggy, with a large body of water in the foreground and mountains in the background. Two people are visible in the foreground, looking towards the landscape.

Keep it dry – How ?

Using the camera for a record of your expedition and downloading to eDofE.

In an Emergency – when/how/who.

For finding out exactly where you are when you have got lost !!!!!!! How do you use it for this ?

Use this App on your phone -

OS Locate 4+
Ordnance Survey Limited >

 1 Friend

★★★★☆ (5)

[OPEN](#)

Download it before you go out!

Once the app is downloaded
It works even if you have no
signal or Data.

It won't tell you which way to go, but at least you will know exactly where you are.

Especially useful in an emergency.

It's a completely free App.

So, if you have a problem on expedition and you don't have it your'e going to look a bit stupid.

So Download
'OS Locate'.
